

## KS 3000 Heated Scanner Series

### **Durability and Performance for Extreme Temperatures**

The KS 3000 Series of heated scanners represents another breakthrough from the industry leader in bar code data collection. The KS 3000 Series of scanners are optimized for extremely low temperature environments and are designed to eliminate exit window condensation when moving from the freezer to normal room temperatures. Available in four models, the KS 3000 Series brings scan decode read ranges of up to 35 ft. (10m) into freezer and cold storage applications.

### **LS 3000 Performance**

The KS 3000 Series is the latest addition to the LS 3000 line of award-winning industrial hand-held scanners from Symbol. With over 500,000 units already sold, the LS 3000 line leads the way in unsurpassed reliability and performance over a wide variety of industrial, commercial and rugged retail applications. To create the KS 3000 Series, Symbol Technologies has integrated an internal heater element with a circulating fan into four of the most popular LS 3000 models. Now you can have clear, condensation and frost-free operation in freezer applications as low as -30°C (-22 °F) along with the extended range performance of the LS 3200ER. Or for applications demanding the ability to read poorly printed or damaged bar codes, Symbol offers with the 'fuzzy logic' performance with the integrated heater in the KS 3603.

### **Multiple Configurations**

There are four KS 3000 models to choose from: For extended range applications the KS 3200ER undecoded and the KS 3203ER decoded scanners can read up to 35 ft. (10m) on 100 mil labels. For standard range applications

Symbol offers the decoded KS 3603 with 'fuzzy logic' or the undecoded KS 3200. The four models give the user, or system integrator, the ability to choose decoded or undecoded, long range or standard range. Data interface options include built-in RS-232 and wand emulation for the decoded models as well as support for most other host systems via Symbol's Synapse™ smart cables. Any LS 3000 data cable will work with the KS 3000 Series.

### **Fork Truck Ready**

The KS 3000 scanner packages come complete with a universal power supply for connection to all standard fork trucks. The power supply takes input voltage from 20 to 72 VDC and supplies power to the heating elements separately from the data connection.

To find out more about the KS 3000 Series of heated scanners and how they can improve your productivity, contact any of our convenient locations listed on the back address panel, or visit us at [www.symbol.com](http://www.symbol.com)

### **KS 3000 Heated Scanners**

- *LS 3000 Series performance with internal heating element*
- *Four versions available: Standard Range, Extended Long Range, Decoded and Undecoded configurations*
- *Supports all fork truck applications*
- *Complete scanner solution for freezer/frozen material distribution*
- *Eliminates condensation caused by extreme/rapid temperature changes*
